

Pepha®-Tight is a highly purified biotechnologically produced extract from the microalgae *Nannochloropsis oculata* combined with a well balanced fraction of polysaccharides. It functions as a skin tightener which provides immediate tightening to the skin. It has been shown to protect human fibroblasts from oxidative stress, simultaneously increasing the formation of collagen-I thereby promoting a long term tightening effect through the strengthening of the skin's connective tissue.

-Wrinkle Test

The efficacy of Pepha-Tight® was performed in an in vivo study with 30 volunteers during 2 weeks. The figure shows the statements of the panelists reporting a very good/good tightening effect. The immediate efficacy of Pepha-Tight® was evaluated in vivo with 20 volunteers applying a test gel containing 5% Pepha-Tight®.
